Vigilant Achieves Record Annual Growth in 2006

Leadership in building Business-Oriented SIEM solutions and next generation Co-Sourcing Services fuel growth in Fortune 1000

New York, New York: April 4, 2007 — Vigilant, LLC, the leading provider of IT Risk, SIEM Integration, and Co-Sourcing services to the Fortune 1000, today announced record revenues and profits in 2006, achieving more than 100% growth over 2005 numbers.

“2006 was a ground-breaking year for Vigilant, as we expanded our services to include several new practice areas focused on Security Program Development, Security Information & Event Management (SIEM) integration, IT Asset Inventory, and SIEM Co-sourcing services,” said Alison Andrews, CEO of Vigilant. “We see our growth as a reflection of the emerging need for convergence in enterprise security solutions. Customers more and more are looking for a single service provider who understands their core business, and can weave information security into the fabric of their organizations with a positive impact to revenue and the bottom-line. The cutting-edge solutions we are building around real-time fraud and money-laundering detection, intellectual property protection, and compliance monitoring demonstrate how Vigilant is responding to customer demands by building advanced solutions to address core business issues.”

Long-term Solution Support through Co-Sourcing:

In order to provide long-term support for these mission-critical solutions, Vigilant teamed up with several leading SIEM vendors to bring an innovative new offering to the world of SIEM. The new offering – SIEM Co-Sourcing – is a hybrid solution that provides full, 24x7 management and monitoring of customer-resident SIEM installations, staffed by a certified team of engineers expert in SIEM technology. This hybrid approach provides Co-Sourcing clients with full-ownership of the SIEM infrastructure, eliminating fears of frictional costs associated with Managed Security Service Provider (MSSP) changes. Additionally, and most importantly, it provides Co-Sourcing clients with a truly tailored SIEM solution – one that provides real-time correlation and prioritization of security incidents based upon their potential impact to critical business assets and functions. Without input from such sources as operating system, database and application logs, identified incidents lack prioritization by business operations, resulting in misallocation of resources and increased risk of financial damages and loss of continuity.

SIEM Co-Sourcing provides an evolving security management system that will adapt to the ever-mutating threats occurring daily on the internet and inside corporate networks. With SIEM Co-Sourcing, Vigilant provides a round-the-clock team whose mission is to ensure that client SIEM solutions provides continuous, real-time alerting and response against hacks, sensitive data loss, fraudulent transactions, or compliance violations.

About Vigilant, LLC

Founded in 2003, Vigilant LLC is the premier provider of Information Security, IT Risk, and Data Center Optimization services to the Fortune 1000. The company focuses on the design and integration of systems that provide holistic, real-time situational awareness – thereby bringing together the traditionally separate worlds of Information Security, ITIL / CMDB, and Business Transaction Monitoring into one solution. Vigilant LLC has headquarters in New York, NY and sales offices in Washington, DC, Chicago and Boston.
